What is claimed is:

1. An absorbent article comprising: a main body including a liquid-pervious top sheet, a back sheet and an absorbent core sandwiched between the top sheet an the back sheet; a layer containing a skin-protective ingredient; and a support layer for covering the ingredient-containing layer, the ingredient-containing layer and the support layer being provided on the surface of the main body to be in contact with the skin of a wearer, wherein;

the solubility in water of the support layer is promoted at 25°C or higher, and/or the moisture absorbability or the solubility in water of the support layer is promoted at a relative humidity of at least 30 %.

- 2. The absorbent article as set forth in claim 1, wherein the support layer is formed of at least one compound selected from the group consisting of polyethylene oxide having a molecular weight of from 100 to 500,000, polypropylene glycol having a molecular weight of from 100 to 10,000, and polyvinyl alcohol having a degree of polymerization of from 300 to 4000 and a degree of saponification of from 50 to 99.
- 3. The absorbent article as set forth in claim 1, wherein the layer containing a skin-protective ingredient is formed of a compound capable of forming an oily film on the skin

of a wearer.

- 4. The absorbent article as set forth in claim 3, wherein the layer containing a skin-protective ingredient can be fluidized at 35°C or higher.
- 5. The absorbent article as set forth in claim 3, wherein the layer containing a skin-protective ingredient is formed of at least one compound selected from the group consisting of liquid polyisoprene, squalane, pristane, ozocerite, ceresine, microcrystalline wax, polyethylene powder, liquid paraffin, vaseline, and paraffin.
- 6. The absorbent article as set forth in claim 1, wherein the two layers are located on the surface of the top sheet.
- 7. The absorbent article as set forth in claim 1, which further includes a leak-preventive cuff for preventing side leakage and/or a leg cuff for preventing leakage through the area around the wearer's thighs, and the two layers are located on the surface of the leak-preventive cuff and/or the leg cuff.
